General

Instruction Manual Beamer Control L2|01 Room 77

1. If the display of the control panel is black, please touch the display with your finger. After ca. 5 seconds, the display is then active.

2. You can now control both beamers separately. By selecting the respective ON/OFF button. Switch the beamer you want on or off..
Please check that the beamers can only be switched on or off one after the other with a delay.

3. If at least one beamer is switched on, select the respective source input for its control.
Es stehen folgende Funktionen zu Verfügung:

- int. PC : **Local PC**
- ext. VGA : **VGA-port for external device**
- ext. HDMI : **HDMI-portfor external device**

You can control the beamers separately by tapping the respective source input. Please note here that for technical reasons there may be a brief flickering of the display (duration approx. 10 sec.) because the input sources are synchronized..

4. To create a freeze image during operation of both beamers, tap the FREEZE key. The image of the projector is frozen. On the other beamer you can now continue your presentation. Tap the FREEZE button again to release the function.

Instruction Manual Beamer Control L2|01 Room 77

- 1.power connection(220Volt/16A)
